<i>Smoothing</i>	<i>Alt + 1</i>

## Customize Hotkeys

All the hotkeys can be customized to your preference.

1. Select **Edit > Preferences** and click the hotkeys tab.
2. Enter preferred hotkeys.

If you enter single keys for hotkeys, they will only work when the viewport window or timeline editor are active. If you select a controller key plus a single key, they will work anywhere.

If you choose a hotkey already used in MachStudio Pro, an error message displays allowing you to enter a new hotkey.
